

InMotionARM™ Therapy

Mercy Rehabilitation Hospital

Recovery Is Within Your Reach

Your life is our life's work.

Retrain. Restore. Recover.

When you're recovering from a stroke or other neurological condition, it's important to strengthen and restore function in your upper limbs. Mercy Rehabilitation Hospital offers advanced treatments and technologies to get you back in motion.

InMotionARM™ Therapy

InMotionARM™ is a robotic-assisted tool used in combination with traditional therapy to help you maximize movements and repetitions in each therapy session.

During therapy, the InMotionARM™ adapts to your movements, gently assisting you with motor-function activities and task-specific training.

It's designed to enhance the smoothness, resistance and speed of your arm motion. Visual displays help you and your therapist see measurable gains in your progress.

If you're receiving rehabilitation care for neurological, shoulder or elbow conditions, ask your Mercy provider how InMotionARM™ therapy can help you reach your therapy goals.
