

Rehab for Brain Injury Recovery

After a brain injury, inpatient rehab is a critical step on the road to recovery. Our accredited rehab program tailors therapy to your needs, so you get the right support as you recover. Our dedicated doctors, nurses, therapists and other specialists work as a team to help improve your abilities and quality of life.

Inpatient Brain Injury Rehab

Every brain injury is different, so having a personalized therapy plan is vital. Our experts provide intense inpatient rehab based on the type and severity of your brain injury. We offer ongoing care that prepares you to live independently or with help from family members and caregivers.

Your Treatment Plan

Our secure rehab unit includes gyms and therapy areas specially designed for brain injury treatment. Your therapy may include:

- **Physical therapy** – sitting, balancing, walking and changing surfaces
- **Occupational therapy** – eating, dressing, bathing and grooming
- **Speech therapy** – speaking, improving memory, being self-aware, swallowing and making food choices

Inpatient Rehab & Improved Function

Inpatient rehab for brain injuries improves function from admission to discharge:

Caregiver Support

Brain injury recovery may seem overwhelming to you and those caring for you, but help is available. Your rehab team can provide you and your caregivers with information and resources to support you. It's also critical for caregivers to pay attention to their own needs, so they can stay healthy enough to help.
